

Franklin Core Plus Bond Fund

Advisor Class: FKSAX Class A: FRSTX

Commentary | as of March 31, 2025

Key Takeaways

- **Markets:** There was a significant swing in market sentiment across the first quarter of 2025 as participants digested the first few months of US President Donald Trump's new administration's policies. Although there was no change in the fed funds rate, US Federal Reserve (Fed) policymakers now expect materially slower growth, higher unemployment and higher inflation this year.
- **Contributors:** Security selection in investment-grade (IG) and high-yield (HY) corporate bonds. Security selection in commercial mortgage-backed securities.
- **Detractors:** Overweight allocation to HY and IG corporate bonds. Exposure to senior secured floating-rate bank loans. Security selection in agency mortgage-backed securities (MBS). US duration positioning relative to the benchmark.
- **Outlook:** Although we expect lower US growth this year with upside risks to inflation, we uphold our view that a significant growth slowdown should not be taken for granted just yet.

Performance Review

- The fund's overweight allocation to HY and IG corporate bonds detracted from relative performance, as did exposure to senior secured floating-rate bank loans. Conversely, security selection in IG and HY corporate bonds contributed to results. During the quarter, we increased our allocations to IG and HY corporate bonds and collateralized loan obligations. We reduced our exposure to senior secured floating-rate bank loans.
- Our security selection in MBS hindered performance, while our exposure to non-agency residential mortgage-backed securities (RMBS) had a largely neutral effect on returns. We increased our exposure to MBS during the quarter, while maintaining our RMBS allocation.
- US duration positioning relative to the benchmark detracted from performance.

Outlook

- Financial markets are digesting the implications of President Trump's "Liberation Day" announcements after quarter-end that provided greater clarity on tariffs. As tariffs are essentially a tax on consumption of imports, there are concerns that they could lead to negative growth, although few would predict an outright recession. We maintain our view that tariff-induced inflation should be transitory in nature, which we estimate up to a 1.5 percentage point impact. (There is no assurance that any projection, estimate or forecast will be realized.) The growth impact on export-reliant foreign countries will be much more significant than for the United States, in our view.
- Although we expect lower US growth this year with upside risks to inflation, we uphold our view that a significant growth slowdown should not be taken for granted just yet. Hard data show the US economy is still in good shape, with a solid pace of economic activity and the labor market in a "low hiring, low firing" equilibrium with a still-low unemployment rate. We believe the macroeconomic outlook will be heavily influenced by the administration's entire economic policy package, including not just tariffs and immigration, but also deregulation and tax cuts (which are expected to follow). Assuming concrete progress on the latter two, they should help lift growth and contain inflation. Overall, we remain optimistic that pro-growth policy measures are still in the cards. We acknowledge, however, that the longer the uncertainty with a lack of progress on deregulation and tax reform, the higher the downside risk to the economy. Against this backdrop, we think the overall balance of risks should limit the Fed to at most one rate cut this year. With the caveat on the aforementioned uncertainty on global growth, risks to US Treasury yields appear to the upside, in our view.
- We maintain our emphasis on diligent security selection and individual company fundamentals for the corporate credit sectors, evaluating each company's fundamentals and exposure to different possible policy alternatives. We believe IG corporate bonds continue to offer relatively attractive yields. While spreads widened slightly during the period, we still view spread levels as offering insufficient cushion for possible downside economic, financial market or geopolitical surprises. This is particularly relevant as we face significant changes to trade, regulatory, fiscal and immigration policies, as well as international relations. Some of these changes may be positive for corporate credit quality and risk sentiment, while others may create even more market volatility or have a negative impact on some sectors and individual bond issuers. In the lower-credit-quality HY and floating-rate bank loan sectors, although we remain broadly constructive amid generally favorable technical conditions and still-supportive fundamentals, we continue to favor a focus on quality companies amid persistent market bifurcation and idiosyncratic opportunities.
- For securitized sectors, our generally neutral stance remains largely unchanged. For the MBS sector, prepayment speeds for the universe remain low, and we do not expect a material increase in 2025. Demand from US banks could increase as the yield curve steepens, deposits grow and the regulatory environment potentially becomes more favorable for banks. Potential cuts in the fed funds rate and a weaker US dollar could draw demand from overseas investors due to improved hedging costs. For RMBS, our neutral stance on the sector is driven by full valuations and modest home price growth expectations. Despite slowing home price growth, we do not expect a significant decline in home prices and regional variances are likely to persist. A lack of inventory and steady household formation should keep the housing supply and demand mismatch supportive of home prices. In spite of our generally cautious stance, we are finding opportunities in higher-quality fixed income investments.

Morningstar Rating™

Overall Rating as of March 31, 2025

★★★★★ (5-Star) Advisor Class

★★★★★ (5-Star) Class A

As of 03/31/2025 the fund's Class A and Advisor Class shares received a 5 star overall Morningstar rating™, measuring risk-adjusted returns against 530, 478 and 346 Intermediate Core-Plus Bond funds over the 3-, 5- and 10- year periods, respectively. A fund's overall rating is derived from a weighted average of the performance figures associated with its 3-, 5- and 10-year (if applicable) rating metrics.

Fund Characteristics

Benchmark(s)

Benchmark = Bloomberg US Aggregate Index

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. Returns with sales charge reflect a deduction of the stated maximum sales charge. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Returns for periods of less than one year are not annualized. All classes of shares may not be available to all investors or through all distribution channels. For current month-end performance, please visit franklintempleton.com.

The fund began offering Advisor Class shares on 8/12/1999. Performance quotations have been calculated as follows: (a) for Advisor Class periods prior to 8/12/1999, a restated figure is used based on the fund's Class A performance. The performance was adjusted to take into account differences in class-specific operating expenses and maximum sales charges. (b) For periods after share class offering, performance for the specific share class is used, reflecting the expenses and maximum sales charges applicable to that class.

Gross expenses are the fund's total annual operating expenses as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns. Net expenses reflect contractual fee waivers, expense caps and/or reimbursements, which cannot be terminated prior to 12/31/2025 without Board consent. Additional amounts may be voluntarily waived and/or reimbursed and may be modified or discontinued at any time without notice.

During periods of rising inflation, fund yields can vary significantly from month-to-month and may not be repeated.

What are the Risks?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Changes in the credit rating** of a bond, or in the credit rating or financial strength of a bond's issuer, insurer or guarantor, may affect the bond's value. **Low-rated, high-yield bonds** are subject to greater price volatility, illiquidity and possibility of default. **Floating-rate loans and debt securities** are typically rated below investment grade and are subject to greater risk of default, which could result in loss of principal. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. The manager may consider **environmental, social and governance (ESG) criteria** in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus.

Glossary

A **collateralized loan obligation (CLO)** is a single security backed by a pool of debt.

Commercial mortgage-backed securities (CMBS) are a type of mortgage-backed security backed by commercial mortgages rather than residential real estate. CMBS tend to be more complex and volatile than residential mortgage-backed securities due to the unique nature of the underlying property assets.

The **yield curve** shows the relationship between yields and maturity dates for a similar class of bonds.

Important Information

Effective December 11, 2024, the Franklin Strategic Income Fund changed its name to the Franklin Core Plus Bond Fund and modified its principal investment strategies. Such a change can impact performance.

The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

The **Bloomberg US Aggregate Index** is comprised of investment-grade, U.S. dollar-denominated government, corporate, and mortgage- and asset-backed issues having at least one year to maturity. Source: Bloomberg Indices.

Important data provider notices and terms available at www.franklintempletondatasources.com. All data is subject to change.

Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. The **30-day SEC yield** is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders.

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, the manager assigns each security the middle rating from these three agencies. When only two agencies provide ratings, the lower of the two ratings will be assigned. When only one agency assigns a rating, that rating will be used. Foreign government bonds without a specific rating are assigned a country rating, if available. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the Fund's portfolio does not apply to the stability or safety of the Fund. These ratings are updated monthly and may change over time.

Please note, the Fund itself has not been rated by an independent rating agency.

Morningstar Rating™. Source: Morningstar®, 03/31/2025. For each mutual fund and ETF with at least a 3-year history, Morningstar calculates a Morningstar Rating™ based on how a fund ranks on a Morningstar Risk-Adjusted Return measure against other funds in the same category. This measure takes into account variations in a fund's monthly performance, and does not take into account the effects of sales charges and loads, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all three rating periods.

Before investing, carefully consider a fund's investment objectives, risks, charges and expenses. You can find this and other information in each prospectus, or summary prospectus, if available, at www.franklintempleton.com. Please read it carefully.

The fund's Class A shares received a Morningstar Rating of 5, 5 and 4 and fund's Advisor Class shares received a Morningstar Rating of 5, 5 and 4 star(s) for the 3-, 5- and 10-year periods, respectively. Franklin Templeton provides this fund's Morningstar Rating™ for Class A and Advisor Class shares only. Other share classes may have different Morningstar ratings.
