

Franklin U.S. Large Cap Multifactor Index ETF (FLQL)

Multi-Factor Factsheet as of June 30, 2024

Investment Overview

The fund seeks to provide investment results that closely correspond, before fees and expenses, to the performance of its corresponding underlying index, LibertyQ U.S. Large Cap Equity Index. The underlying LibertyQ U.S. Large Cap Equity Index generally includes U.S. large capitalization companies that have favorable exposure to three investment style factors: quality, value and momentum.

Total Returns (%)

	Cumulative			Average Annual				Inception	Inception Date
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr		
Market Price Return	4.66	17.03	17.03	25.78	11.06	13.71	—	13.57	4/26/2017
NAV Returns	4.55	17.00	17.00	25.80	10.95	13.72	—	13.56	4/26/2017
Investment Universe	3.57	14.24	14.24	23.88	8.74	14.60	—	13.85	—
Underlying Index	4.58	17.08	17.08	25.92	11.09	13.86	—	13.76	—

Calendar Year Total Returns (%)

	2023	2022	2021	2020	2019	2018	2017	2016	2015	2014
Market Price Return	23.61	-14.83	26.57	10.70	29.08	-2.78	—	—	—	—
NAV Returns	23.46	-14.80	26.69	10.64	28.76	-1.96	—	—	—	—
Investment Universe	26.53	-19.13	26.45	20.96	31.43	-4.78	—	—	—	—
Underlying Index	23.61	-14.69	26.89	10.77	29.03	-1.73	—	—	—	—

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. For current month-end performance, please visit franklintempleton.com.

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 4 p.m. Eastern time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading April 28, 2017, the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

Growth of \$10,000

Inception through June 30, 2024

Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

What should I know before investing?

All investments involve risks, including possible loss of principal. Equity securities are subject to price fluctuation and possible loss of principal. To the extent the portfolio invests in a **concentration of certain securities, regions or industries**, it is subject to increased volatility. There can be no assurance that the fund's **multi-factor stock selection** process will enhance performance. Exposure to such investment factors may detract from performance in some market environments, perhaps for extended periods. Performance of the fund may vary significantly from the performance of an **index**, as a result of transaction costs, expenses and other factors. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. These and other risks are discussed in the fund's prospectus.

Glossary

Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. **Beta:** A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. The **30-day SEC yield** is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Important Information

The LibertyQ U.S. Large Cap Index methodology utilizes a custom factor weighting (40% Quality, 30% Value, 30% Momentum) and custom factor definitions. This methodology automatically selects securities with weights of 1% or greater in the Russell 1000 Index. Of the remaining securities in the Russell 1000 Index, those in the top 20% (ranked by their factor score) are selected. All securities are held according to their (Benchmark Weight) x (Composite Factor Score), subject to security constraints. **Quality** is measured by return on equity (ex. REITs), 5-year earnings variability, cash return on assets (ex. REITs and Financials), leverage (ex. Financials and REITs), and operating cash to sales (REITs only) and ROA (REITs and financials only). **Value** is measured by 12-month trailing price-to-earnings (ex. REITs and Financials), 12-month forward price-to-earnings (ex. REITs and Financials), dividend yield (ex. REITs and Financials), 1/3 relative z-score of dividend yield and 2/3 relative z-scores of the price-to-book (REITs and Financials only). **Momentum** is measured by 6-month risk-adjusted price momentum and 12-month risk-adjusted price momentum.

ETFs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

ETF shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
