

Franklin Short Duration U.S. Government ETF (FTSD)

Government | Factsheet as of March 31, 2025

Investment Overview

The fund seeks to provide a high level of current income as is consistent with prudent investing, while seeking preservation of shareholders' capital by investing at least 80% of its net assets in securities issued or guaranteed by the U.S. government, its agencies, or instrumentalities. The fund targets an estimated average portfolio duration of three (3) years or less.

Total Returns (%)

	Cumulative			Average Annual				Inception	Date
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr		
Market Price Return	1.37	1.77	1.37	5.61	3.32	1.83	1.61	1.53	11/4/2013
NAV Returns	1.49	2.01	1.49	5.73	3.34	1.84	1.62	1.56	11/4/2013
Benchmark	1.62	1.53	1.62	5.42	2.85	1.15	1.50	1.41	—

Calendar Year Total Returns (%)

	2024	2023	2022	2021	2020	2019	2018	2017	2016	2015
Market Price Return	5.20	4.84	-3.13	-0.90	3.13	2.39	1.64	0.63	0.91	0.52
NAV Returns	5.12	4.85	-3.13	-0.84	2.98	2.97	1.20	0.79	1.01	0.35
Benchmark	4.04	4.32	-3.81	-0.60	3.14	3.59	1.58	0.45	0.87	0.57

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. For current month-end performance, please visit franklintempleton.com.

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 4 p.m. Eastern time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Performance for the ETF and its benchmark index are as of the ETF's last trading day before the end of the period. Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading November 6, 2013, the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

Growth of \$10,000

Inception through March 31, 2025

Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

Portfolio Data Information

Exposure: Notional exposure figures are estimated and are intended to show the portfolio's direct exposure to securities and indirect exposure, through derivatives. Direct and indirect exposures are subject to change over time and methodologies for calculating indirect exposures vary by derivative type. Portfolio breakdown percentages may not total 100% and may be negative due to rounding, use of derivatives, unsettled trades or other factors.

What should I know before investing?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Asset-backed, mortgage-backed or mortgage-related securities** are subject to prepayment and extension risks. **Changes in the credit rating** of a bond, or in the credit rating or financial strength of a bond's issuer, insurer or guarantor, may affect the bond's value. These and other risks are discussed in the fund's prospectus.

Glossary

Beta: A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. **R-squared** measures the strength of the linear relationship between the fund and its benchmark. R-squared at 1 implies perfect linear relationship and zero implies no relationship exists. **Sharpe Ratio** refers to a risk-adjusted measure calculated using standard deviation and excess returns to determine reward per unit of risk. The higher the ratio, the greater the risk-adjusted performance. **Standard Deviation:** Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. The **30-day SEC yield** is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders. **Weighted Average Maturity:** An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes.

Important Information

ETFs and ETPs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs/ETPs net asset value. Brokerage commissions and ETF expenses will reduce returns.

ETF/ETP shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs/ETPs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF/ETP (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
